安装Shadowsocks

安装pip

curl "https://bootstrap.pypa.io/get-pip.py" -o "get-pip.py"

python get-pip.py

安装shadowsocks

pip install --upgrade pip

pip install shadowsocks

配置/etc/shadowsocks.json

```
{
  "server": "0.0.0.0",
  "server_port": 6666,
  "password": "password",
  "method": "aes-256-cfb"
}
```

配置启动脚本文件/etc/systemd/system/shadowsocks.service

```
[Unit]
Description=Shadowsocks
[Service]
TimeoutStartSec=0
ExecStart=/usr/bin/ssserver -c /etc/shadowsocks.json
[Install]
WantedBy=multi-user.target
```

启动服务

```
systemctl enable shadowsocks
systemctl start shadowsocks
systemctl status shadowsocks
```
